

Extended Education

November 12, 2025

For Immediate Release

ECAM training can now be applied towards two University of Manitoba Extended Education certificates

University of Manitoba Extended Education now recognizes Electrical Contractors Association of Manitoba (ECAM)'s Construction Fundamentals training as 36 hours of elective credit in two UM Extended Education programs: the Certificate in Applied Management (CAM) and the Certificate in Building Information Modeling (BIM) Management.

This recognition of prior learning provides ECAM members with a new pathway to advance their professional development by building on the skills gained through ECAM's industry training while working towards a University of Manitoba certificate.

UM Extended Education is excited to announce this new partnership. We look forward to welcoming ECAM members to our learning community and supporting their continued growth as leaders in Manitoba's construction industry.

Registration is now open for courses in the Certificate in Applied Management and Certificate in Building Information Modeling (BIM) Management programs. Classes start in January 2026.

For specific program and courses information:
