

Next Gen BIM Education & Beer Tasting April 12, 2023

On April 12th, ECAM's Next Gen Advisory Council hosted a unique event that combined BIM education and beer tasting at Trans Canada Brewing. The event was a great opportunity for the "next generation" of the electrical industry to network with peers and expand their knowledge on Building Information Modeling (BIM) while enjoying some local craft beer.

The evening started with a introductory presentation on BIM by a seasoned industry professional, Paul Shack from Nor-Tec Group. Paul highlighted the benefits and challenges of implementing BIM in construction projects. Attendees were given an overview of the technology, its capabilities, and the impact it has on the construction industry. The presentation was followed by a Q&A session where attendees had the chance to ask questions and clarify their doubts.

After the BIM education session, it was time for the beer tasting. Trans Canada Brewing offered a variety of locally brewed beers to taste and a quick tour of the brewery. Attendees were able to sample a range of different beers, from light lagers to bold sours, while networking with other young professionals in the industry. Thank you to our Beer Sponsor, IMAGINIT. Finally, guests filled their plates with delicious made in-house pizza sponsored by MCW Consultants.

This was the first ECAM Next Gen event and was a testament to the importance of continued education and professional development in the construction industry, and the benefits of fostering a sense of community among industry peers.
